

electrophoresis automated system

GiantIFE

The most advanced electrophoresis system for  
IMMUNOFIXATION

a Start project  
diagnostic division

# electrophoresis automated system

## Versatile

Allows to perform the most spread techniques: Serum Proteins – Haemoglobins – Lipoproteins – Immunofixation.

Serum Proteins

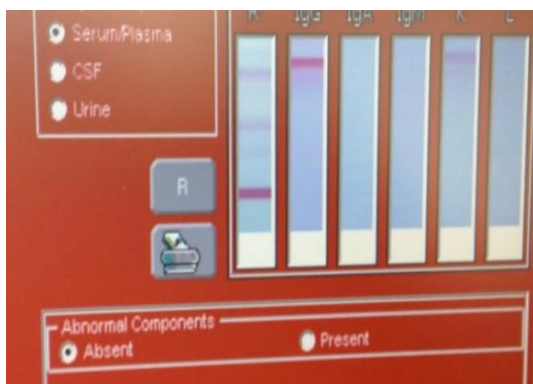

Haemoglobins

Lipoproteins

## complete/walk-away/accurate

GiantIFE automatically arranges the loading of all the reagents, to standardize the delicate electrophoretic process.

Automated Ag/Ab reaction contact

Integrated webcam for results survey

Clear and friendly software, for a complete patient report

**productivity** Serum-Proteins : 40 samples/ Lipoproteins; 40 samples// Haemoglobins: 40 samples  
**Immunofixation: 5 samples**

## software features

- Operating system: Microsoft Windows XP/Vista/Seven
- User interface: monitor, keyboard and mouse
- Minima recognition: automatic
- Managing techniques: adjustable techniques in times, migration voltage/current and wavelength
